

BountiGel[®] P

PRODUCT USAGE GUIDE

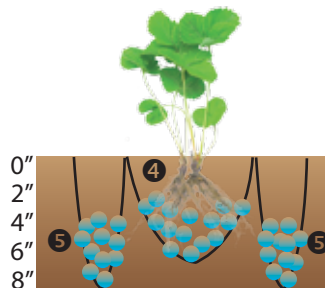

Application: Powder mixed into liquid suspension

- ◆ **At listing or pre-plant:** Shank/knife-in liquid suspension. ❶
- ◆ **Transplanting:** Apply liquid suspension to transplant water.
- ◆ **Post-planting:** Side dress liquid suspension post-planting. ❷

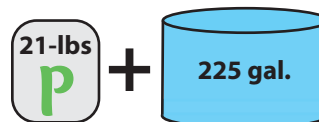

Product Uses:

- ◆ **For improved seed germination:** Apply product at seed depth in the seed line. ❸
- ◆ **For improved transplant survival and uniform establishment (tomato, strawberry, etc.):** Shank/knife-in product pre-transplant, OR apply product in transplant water, close to transplant line at root zone and 3-6" depth. ❹
- ◆ **For improved seasonal crop growth:** Apply product in or close to plant line at root zone and 4-8" depth. ❺

Rates:

- ◆ **Prior to mixing:** remove filters to prevent clogging.
- ◆ **Mix** one 21-lb bag of BountiGel P (powder) into 225-gallon liquid suspension (water with/without liquid fertilizer). Natural effervescence will occur when mixing into solution.
- ◆ **Apply** the BountiGel P mixed liquid suspension at a minimum rate of 75 gallons per treated acre.
